Strategy - Economy Wide				
How do we understand our broader economy? How do we frame where we in terms of education/skill attainment as a path to earning potential				
Policy	Data Source	Potential Method	Key questions	Sub Questions
Core Measurements	Secure 2017 DCI data and index across the country to understand trends and where we are.	Go back as far as possible and perform a trend analysis to distinguish relationships.	How are these variables related to each other and how do events in the state and national economy affect these variables?	What factors in the economy (various) have the greatest impact? Can we produce a more meaningful set of variables to communicate experience
Our Talent to Productivity Ratio	Integrate with Citywide Census demographic data.	Same	What are is consistent ratio of demographic and education inputs to jobs and earnings?	At what scale do we have to move in order to impact top line metrics?

Place	Integrate with business location data.	Same	Subdivide this analysis into census tract and Zip Code or other geographies to understand and prioritize interventions based on localized correlations.	What elements by geography should we focus on locally.
People	Integrate educational attainment data, state data as well as institutions data.	Same	What are the demographics of the most and least mobile?	Who should we focus on? OR Who needs the most assistance?
Project	Add all property tax and sales tax generation records	Same	Can changes be associated with physical development? Is so how and what shows the greatest impact?	What are the most impactful types of development to core mesurements?
				What are the most impactful in terms of City Revenue?

Metrics			
What do we feel are the indicators that coorelate with that condition most closely and when are the data sets available?			
Programmatic Framing - Running Test Scenarios through Model			
What are we trying to affect?	What are the most meaningful metrics that demonstrate progress?	What kind of intervention could actually impact that metric.	What is reasonable progress over what period of time?

Programmatic				
How do we track who we are helping through to a predefined outcome over a relevant temporal scale.				
Intervention and Interim Measurement - Execution and validation of model				
Establish Integrated Intervention	Establish Target Population	Establish Target Geography	Establish Type of Project	Establish specific data requirements of program information systems.
